

ENVIRONMENTAL

ENVIRONMENTAL BUCKETS

The Cable Arm environmental buckets are built with an over-square footprint, complete venting system which includes the new open center design, and overlapping sideplates.

All environmental bucket models have an optional “angled cut” feature for inclined bottoms.

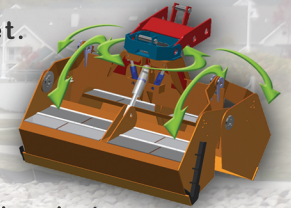

HYDRAULIC

HYDRAULIC BUCKETS

The newest addition to Cable Arm's line of environmental buckets is the hydraulic bucket.

With the same features as the cable operated buckets,

the environmental model surpasses any and all competition with its multi-axis operating capabilities to allow precise sediment removal.

Our goal is to: “Achieve total customer satisfaction by increasing dredger sediment removal profit and reducing project owner cost through increased dredging efficiency.”
